Alas- more sand through the hourglass.
The world becomes more and more an alien place-
no John Wayne, no Merrell Lynch, no Paul Harvey.
Our Hank Reardens pass away,
leaving us with only Wesley Moochs.

CHICAGO - Paul Harvey, the news commentator and talk-radio pioneer whose staccato style made him one of the nation's most familiar voices, died Saturday in Arizona, according to ABC Radio Networks. He was 90. Harvey died surrounded by family at a hospital in Phoenix, where he had a winter home, said Louis Adams, a spokesman for ABC Radio Networks, where Harvey worked for more than 50 years. No cause of death was immediately available.

Harvey had been forced off the air for several months in 2001 because of a virus that weakened a vocal cord. But he returned to work in Chicago and was still active as he passed his 90th birthday. His death comes less than a year after that of his wife and longtime producer, Lynne.

"My father and mother created from thin air what one day became radio and television news," Paul Harvey Jr. said in a statement. "So in the past year, an industry has lost its godparents and today millions have lost a friend."

When's the last time you had a house call from a Teletype repairman? Not recently, I'll wager. But that's just what we had last Saturday at KSM.

In response to my message to the Greenkeys list George Hutchinson packed up his Teletype tools and drove down to KSM from his home in Sequim, WA. He and Rich McClung showed up at about 1pm ready for business.

First the problem with the Model 28ASR was addressed. George quickly unlocked the keyboard (the original problem) and then spent almost two hours removing the typing unit, lubricating everything, cleaning contacts, reassembling the machine and giving it a tune up. By the end of that process it was running sweet at 60wpm and 100wpm, maintaining lock even being fed a significantly distorted signal.

The next item was the Model 28KSR that we plan to use as one end of a land line order wire between transmitting and receiving stations. This unit worked but just barely. George looked it over and declared that the typing unit should be swapped with one from a Model 20R0 we had on hand that was in great shape. The new typing unit got the usual lubrication and tune up before being placed in the 20KSR. It too now ran very sweetly at both 100wpm and 60wpm.

Rich and I agreed that it was a real pleasure to watch a master at work. Clearly, George knows Teletypes inside and out, a skill that comes only with long experience.

After several hours work George packed his tools and test gear saying "my work is done here." The three of us went to the Station House Cafe in Point Reyes Station for a dinner that couldn't be beat. We agreed it was a great day before parting ways.

Naturally such an event deserves photodocumentation so here are some photos.

George beams with anticipation at having two Model 28s to work on:

<http://www.radiomarine.org/TTY/TTY-002.jpg>

A careful adjustment is made to the perforator:

<http://www.radiomarine.org/TTY/TTY-003.jpg>

The typing unit out for lubrication and adjustment:

<http://www.radiomarine.org/TTY/TTY-005.jpg>

The Model 28R0 running well:

<http://www.radiomarine.org/TTY/TTY-004.jpg>

A video of the Model 28R0 being tested at 100wpm:

<http://www.radiomarine.org/TTY/TTY-008.avi>

Thanks very much to George and Rich for generously making their time and skills available to help the MRHS move toward another goal. Once we have the TTY land line link working between the two stations it will be another step back in time to the days when such links were common. When that link is inaugurated - this year we hope - we'll be communicating the way transmitting and receiving stations did in the golden years.

That would have been a nice note, if it left out fiction from the twisted mind of Ayn Rand.

But yes, the sands of time run through the infinite hourglass, and evolution has its way with us.

The voices of the past can no longer be heard on the radios of the past.

Bill Hawkins

RD those are great photos and the video will bring back lots of memories =
to
any/all TTY repairmen. TTY school in the Navy was the toughest school I =
went
to and I recall the drop out rate was about 40 percent. Now try doing =
TTY
repairs while on a 400 ft destroyer in a North Atlantic winter storm. =
The
TTY repair shop was in Aux Radio on the 02 level forward of the after 5 =
inch
gun. I was working on a typing unit giving it a tune up after replacing =
a
clutch (major job) and had it going when the ship took a long slow roll =
to

starboard, I said... Uhoh....hung on and heard a wave flowing aft =
striking
the superstructure and kaawham it hit Aux Radio with such force it =
knocked
the monkey s*it out of an unused antenna feed through and gave me a salt
water bath, along with the test gear. Being a TTY repairman (only one on =
a
tin can) was a collateral duty and I still had to stand my port and =
report
watches in Radio Central. Ever try doing repairs when the Gunnersmates =
were
having target practice with those 5 inch guns... Most of us also did =
double
duty repairing mimeograph machines, how many of the readers remember =
these!

Hi Richard,

You have a rare resouce there! Hang on to him. Its probably easier to find a doctor that makes house calls. :-)

All this talk about Teletype repair inspired me to post two photos of scenes which will never be repeated again. Both photos centre on Teletype students. I got those photos from a recently dontated Model 15 Page Printer manual. These photos were inserted into the manaul by the previous owner.

http://jproc.ca/test/tty_student1b.jpg
http://jproc.ca/test/tty_students%202b.jpg

Aboard HMCS HAIDA, I have 2 x Model 15 page printers, 1 x Mod 14 reperforator and 1 x Model 14 TD under my care. The gentlemen who donated the machines in 1994 overhauled them. I only need to oil them annually but to ensure their surviability, I have made it a point to acquire all the maintenance manuals. Also, having one-for-one spare units means this gear will be operational in perpetuity.

Isn't it amazing that once upon a time, complex machines were made to be serviced?

thanks for the cool scans

Content-Type: text/plain;
charset="iso-8859-1"
Content-Transfer-Encoding: quoted-printable

I'm working on an article about the B&W 6100 transmitter for Electric =
Radio. I've traced the B&W ads in QST from their first appearance in =
February, 1937 through December of 1959 where my QST CD's run out. I'm =
looking for a copy of the first advertisment for the B&W 6100. I have a =
copy of QST for October, 1962, and the B&W ad for the 6100 in that =
magazine. Moore lists the first year for the B&W 6100 as 1962, so the =
first ad would be in QST somewhere between January and September, 1962. =

I'd very much appreciate one of you folks looking through your QST's for = that time span and scanning in the first 6100 ad for me.

Thanks very much!

Jim Hanlon, W8KGI

My Ranger's front panel paint is badly worn. Does anyone know of a place that repaints them? Alternately does anyone have a front panel in good condition?

Mike VE7MMH

First off, I want to thank Garey, K40AH, with the help on the B&W 6100 =
advertisement. This group is a really great resource! =20

The reason for this message is to ask if anyone out there has had any =
hands-on experience with a B&W-6100. Ray Moore in his Transmitters book =
says that there were only 200 of them made, so the chances of finding =
another user/owner might be somewhat slim. But you never know. My 6100 =
is serial number 123. Thanks to some notes made by the original owner, =
I know it was updated in October 1964 per instructions sent out by B&W =
to be like the latest production units. I wonder if it was the 123rd =
one built or perhaps the 23rd built. My particular transmitter has a =
switch on the front panel not shown on either the pictures of the rig in =
the manual or in the ads I've been able to find in QST. It appears to =
be an original part of the rig, and its label says "Carrier Osc Off." =
It does indeed turn the carrier oscillator off when I throw it, but that =
puts the entire rig off the air. I wonder what in the world it was for! =
=20

If you have any stories about the B&W 6100, I'd appreciate hearing them. =
I'm working on an article for the rig for Electric Radio, and they just =
might find their way into the magazine.

Thanks and 73,

Jim Hanlon, W8KGI

Hi Jim,

I have one and it's working pretty well....

I can get it out , send SN etc. I use it pretty regularly on the Vintage SSB net on Sunday afternoon. I've also got the matching amp, but have not gone through it yet. (Sound familiar). Can you send a pic of that extra switch you describe?
